PUBLICATION ANNOUNCEMENT

A Descriptive Index of Mortality Studies from Selected Sources 1951 - 1995

R. B. Singer, M.D., M. W. Kita, M.D., and J. R. Avery

(1996-2000 Reference Supplement Included)

The purpose of this reference volume is to provide an annotated bibliography of mortality follow-up results, classified by disease or risk factor code, from some of the principal monographs devoted to such studies.

This work is of great value to medical directors, actuaries and underwriters involved in risk classification for insurance or structured settlement and annuities. Medical libraries, clinical investigators, epidemiologists, scientists, physician, and all users of mortality follow-up studies will benefit from this reference.

Each entry in the Descriptive Index includes a subject and source code, a brief description of the series studied. Sources used include:

- 1951 Impairment Study.
- 1976 Medical Risks (compilation)
- 1979 Build Study
- 1979 Blood Pressure Study
- 1990 Medical Risks (2-volume compilation)
- Medical Risks - 1991 Compend
- Articles abstracted for J. Ins. Medicine
- **1,298 entries in all**
 every entry includes (*summary mortality findings, along with specific references to the underlying source material*)

PUBLICATION ANNOUNCEMENT

MULTIPLE MEDICAL IMPAIRMENT STUDY

The Multiple Medical Impairment Study is a study of medical impairment mortality of insured lives with two or more impairments. This is a follow-up to a study of insured lives with a single medical impairment published in 1986. Both studies deal with the mortality experience between 1962 and 1977 policy anniversaries on nearly 2,400,000 policies issued at standard and substandard premium rates.

This is the first study ever of the effect on mortality of insured lives with more than one impairment, and therefore the results are of great value and interest. Moreover, the analysis and presentation of results will serve as a model for future studies.

The results generally are comparable to those in the Single Medical Impairment Study and continue to demonstrate that life insurance underwriting practices have been successful in classifying risks in the appropriate premium classes.

The publication of the Multiple Medical Impairment Study has been delayed because of the complexity of presenting multiple impairment data. The results are presented for each impairment in combination with groups of impairments. The presentation enables the reader to determine the mortality effect of a specific impairment (e.g., Diabetes Mellitus) in combination with groups of impairments having similar degrees of severity as related to extra mortality or in combination with groups of impairments of a similar nature. For the more frequently occurring impairments, impairment groups of a similar nature are shown in combination with other impairment groups. Also shown are the mortality results for insured lives with three or more impairments.

This book has been produced under the auspices of the Mortality and Morbidity Liaison Committee (MMLC), which is comprised of members of the Society of Actuaries (SOA), the American Academy of Insurance Medicine (AAIM), the Home Office Life Underwriters Association (HOLUA), and the Institute of Home Office Underwriters (IHOU). Financial support was provided by MIB, Inc. Statistical analysis and publication production were provided by the Center for Medico-Actuarial Statistics (CMAS).
